

SCR-5

Screen Protector for Opticon H-28

This custom made Screen Protector is designed for the Opticon H-28 and is made from the best grade matte protection foil available on the market.

Not only offering perfect screen protection but its matte surface also reduces light and sun reflections on your screen.

Long lasting performance due to an extremely scratch-resistant and durable surface. Enhanced with additional anti-fingerprint coating, dirt and fingerprints can easily be wiped off.

The latest developed adhesive layer ensures that you can attach the screen protector in a stress-free way.

Here's an overview of it's advantages:

- ✓ Matte and Anti-Glare
- ✓ Anti-Scratch
- ✓ Anti-Fingerprint
- ✓ Easy to apply
- ✓ Easy residue-free removable

APPLICATION INSTRUCTIONS

How to apply the Screen Protector (SCR):

Place the H28, the SCR on a solid surface which is free of dust. Then wash your hands thoroughly. Clean the H28 screen with the wet wipe #1 to remove dust and dirt marks, then dry with wipe #2.

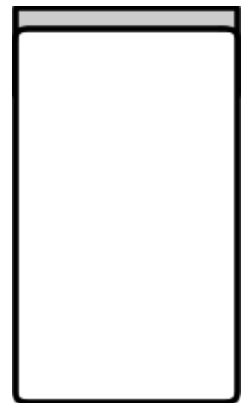

On one side you will find a small area which is the starting point to peel (indicated by the grey area in the image). The thinner part is the film that protects the actual SCR.

Peel the film off halfway and begin to apply the SCR aligning it from one side of the screen.

Caution: Do not touch the adhesive side of the SCR with your fingers!

Slowly peel off the remainder of the film and apply the rest of the SCR to the scan window.

If the SCR is not positioned centrally after having been applied, use some normal sticky tape to remove it from the scan window and start again.

REMOVAL INSTRUCTIONS

Use some normal sticky tape and apply this on top of the SCR. Lift and remove the SCR from the scan window.

Clean the window with a microfibre cloth if any dust or dirt marks are visible on the scan window. A new SCR can be applied now.
