Standard Asset Management kit

Quick and simple way to register objects with the Opticon OPH-3001 barcode terminal

With the scanSYNC Standard Asset Management kit you have all the tools together in one bundle to start registering your assets. The only thing required is a computer with a free USB port.
Operates **without** any drivers and **without** communication software!

This kit allows you to register all the objects present in a room or certain area. After the area reference is entered you can simply scan all the assets in that area. Alternatively, via the keypad on the OPH-3001, you can indicate that there are multiple items present of the same code in an area.

Finalize one area when ready to be able to continue to the next area.

The OPH-3001 will store all gathered information in a single CSV-file, which can be copied from the OPH-3001 similar to a USB memorystick.

| area | → | object | → | quantity | date | time | *date & time are added automatically* |

Number of fields	: 3
Barcode Types	: 1D
Memory	: 128 Mb
