

Standard Inventory Kit

Easy and efficient way to register inventory with the Opticon OPH-3001 barcode terminal

The scanSYNC Standard Inventory Kit contains all you need to start registering your inventory. The only thing required is a computer with a free USB port.

Operates **without** any drivers and **without** communication software!

The keypad on the barcode scanner allows you to enter a code if the barcode is damaged and / or add an amount to the last barcode scanned.

When you have completed scanning in a specific reference you can close this reference and start a new one.

The OPH-3001 will store all gathered information in a single CSV-file, which can be copied from the OPH-3001 similar to a USB memorystick.

Number of fields : 3
 Barcode Types : 1D
 Memory : 128 Mb
 Interface : USB 2.0
 File format : CSV
 Operating mode : Batch
 Supported OS : Windows, Linux

Complete kit contains:
 – Opticon OPH-3001 terminal, with scanSYNC Inventory software pre-installed
 – DOKKi CLK-1 docking station
 – USB cable
