Standard Order Kit

Easy and efficient way to register your orders with the Opticon OPH-3001 barcode terminal

The scanSYNC Standard Order kit is our complete entry-level order solution. All you need is a computer with a USB port.

Operates **without** any drivers and **without** communication software.

The scanner of keypad can be used to provide an order reference. This field will be locked until the order is marked complete.

All articles scanned after providing a reference will be stored under this reference. An amount can be entered using the keypad

When scanning articles in an order is finished a new order can be started.

The Opticon OPH-3001 will store all orders in a single .CSV file. This can be copied from the OPH-3001 similar to a USB memorystick

order number ➡ article ➡ quantity | date | time   *Date & time are added automatically*
