The information below is for reference purposes only.

 1D barcode  IrDA  IP54

The Opticon OPL-9725 OSE is a small and lightweight data collector. This scanner collects your information at an impressive 100 scans per second. Scanning barcodes is simple and accurate with this one-button device.

Note: Although the model number is similar to its predecessor, the OPL-9725, this software isn't compatible with this particular model due to a different micro processor. You will have to recompile the original OPL-9725 source, or alternatively write a new program.

Product Features

The Opticon OPL-9725 OSE is sealed up to IP 54 standards. The on-board memory is large enough to accommodate an entire day of scanning. The internal real-time clock (RTC) enables each record to be tagged with a date/time stamp for accuracy.

The IrDA interface allows wireless data transfer when the scanner is inserted in the cradle for charging.
