

Description

Opticon PX36 is a pocket-sized batch terminal with a [Bluetooth v4.0](#) interface and a [2D scan engine with auto-focus](#). Scanned data can immediately be sent to other Bluetooth devices. An integrated real-time clock adds a date and time stamp to every identified barcode.

Product Features

Opticon PX36 high performance LED's create a sharp contrast between the code and the background for fast reading and decoding of both 1D and 2D codes. The codes are stored on the on-board memory enabling storage of data. The memory is large enough to accommodate an entire day of scanning.

Easy data entry

The Opticon PX36 is equipped with one scan key, two extra function keys and an alphanumeric keypad enabling easy data entry. The LCD display allows easy readability of as many as 10 lines of information. A single cradle as well as a multicradle are available for communication and charging. The IrDA interface within the cradle allows data transfer when the scanner is inserted for charging.
