## Description

---

The MDI-3100 is a 2D imager with integrated decoder. A sharp single line of green LED makes it easy to aim the scanner.

The MDI-3100 is a Fixed Focus module and can be ordered in the following two models:

- Standard Range (SR) model - FF @ 130mm
- High Density Range (HD) model - FF @ 70mm

The imager enables high speed scanning of standard linear (1D) and 2D symbologies. The extremely high speed performance ensures stress free scanning and a fast response without being affected by hand movement or light conditions.

A "Data Editing Program" captures up to 16 codes on multiple images simultaneously in one go. The power consumption in operating, standby and low power states has been drastically reduced. Various power saving settings can be configured in low power mode.

The MDI-3100, with its combined camera and decoder module, is compact and easy to install.
