

Description

Application Development

We can develop any custom application, tailored to your exact workflow and needs.

Development for the following platforms:

- PC
- Android
- Windows Mobile/CE/WEC
- Proprietary (batch terminals i.e. OPH-1005, OPH-3001, OPL-9815, PX-36, OPN-2006, etc.)

With years of experience building custom applications for our customers your project is in the right hands with us. Feel free to contact us with your inquiry, or alternatively we can assist you in getting the specs together.

Each project needs its own approach, but here's a general idea of how we work:

- getting the basics on the project (what, why)
- rough idea of what needs to be accomplished by scanning
- current workflow (if any)
- specs on the codes (symbolology, size, quality)
- functions (menu)
- offline or realtime data
- input files (offline)
- output files (offline)
- checks/security

After this the given information will be put together in a 'Quick Check' document by us. This document is sent to you to be checked and confirm that all requirements are understood and met.

From here we consult with you on how to further approach and formalize the project.
